Executive Summary

- All Authors: Aisari, Wajid (helped with versioning)
- Date of last edit: 25th February
- Current Version: 1.3
- Version history:

Iteration	Note	Date	Author
1.0	Setup	22nd feb	Aisari
1.1	Interface Updates	23rd feb	Aisari
1.2	Refactoring	24th feb	Aisari
1.3	Standardising	25th feb	Aisari

Version 1.0

1. Initial Project Setup
    a. Established fundamental project, folder and file structure for future maintainability and readability.
    b. Configured development environment, tools and communication with the team.
2. Interface and Class Design
    a. Outlined key abstract classes and interfaces for future development and feedback.
    b. Implemented initial annotations and comments for better maintainability.
3. Structural Outline with Inline Documentation
    a. Configured files paths that will go with the expected functionality of the system.
    b. Added comments for functions and methods.

Version 1.1

1. Interface Updates
    a. Refined the interfaces structure based on the feedback and requirements of the system.
2. Updates to parameters and return types
    a. Altered parameters and return types to fit better with the updates.
3. Addition of new types
    a. Addition of new types inline with the requirements.
4. Addition of new methods
    a. Added new methods to support extended functionality.
    b. Followed naming conventions and coding standards to ensure consistency across codebase.
    c. Implemented annotations and comments for better maintainability.

Version 1.2

1. Refactored method and variable names
    a. Enhanced clarity by following industry naming standards.
    b. Reduced the ambiguity across the code.
2. Finalized the abstract interface implementation
    a. All abstract methods are properly defined.
    b. Abstract methods contain proper doc-comments explaining their purpose.
    c. Ensuring that methods consistently align with their interfaces
3. Standardized method structure
    a. Consistent use of “@Overide” at suitable locations across abstract class implementations.

Version 1.3

1. Standardised naming across all classes to follow coding conventions, improving readability and maintainability.
2. Finalized and aligned abstract class implementations with their respective interfaces to ensure full method coverage and contract compliance.
3. Fixed inconsistencies in naming and method implementations.
